[EDUCATION] v(4pt) line(length: 100%, stroke: 1pt + accent)

University of Technology Sydney
B.Eng (Hons) / Dip. Professional Engineering Practice

Major: Mechatronic Engineering
Jan 2024 – Nov 2029 (expected)

WAM 81.12 GPA 5.92

St Mary's Cathedral College
High School Diploma

1st — Engineering Studies, Sydney Catholic Schools
ATAR 88.9 | 2022–2023

v(4pt) line(length: 100%, stroke: 1pt + accent)

Penultimate-year Mechatronics Engineering student with hands-on experience in embedded sensing systems, analogue signal processing, and rapid hardware prototyping.

Passionate about applying sensor fusion and AI to solve real-world infrastructure challenges. Proven ability to design, build, and iterate on multi-sensor hardware from PCB layout through to software integration — independently and as part of high-performing research teams.

Product Development Engineer

"I did a thing" · YouTube 5.6M+ SUBSCRIBERS

May 2025 – Present

- Sole engineer delivering 10+ functional prototypes for one of YouTube's largest engineering channels — averaging just 30 working hours per complete project cycle (ideation → sourcing → fabrication → iteration).
- Designed and built a wearable flotation device with integrated sail mechanism; produced an autonomous CO₂-actuated projectile system — both requiring rigorous sensor and actuator integration.
- Full engineering autonomy across every stage; all prototypes built to withstand hours of repeated takes during professional filming.
